BASE.VN

SOLUTION OVERVIEW

An EUDR-compliant traceability system

For agricultural and forestry exporters supplying the European market

What this document covers

An introduction to Base.vn, the requirements of the EUDR, the traceability solution, reference projects and the implementation approach.

01

About Base.vn

Pages 03 - 04

- Platform capabilities and awards
- Security and quality certifications

02

Context and current situation

Pages 05 - 07

- Scope and compliance deadlines
- What must be demonstrated
- The bottleneck in shipment-level traceability

03

Proposed solution

Pages 08 - 21

- Three-layer system architecture
- Six-stage data flow
- Plot records and geolocation data
- Digitised records and field data capture
- Linked code chain by shipment
- Lookup portal and reporting
- Integration with existing systems

04

Projects and implementation

Pages 22 - 25

- Chư Sê Kampong Thom
- Go-Pak Paper Products Vietnam
- Proposed implementation roadmap
- Contact information

ABOUT BASE.VN

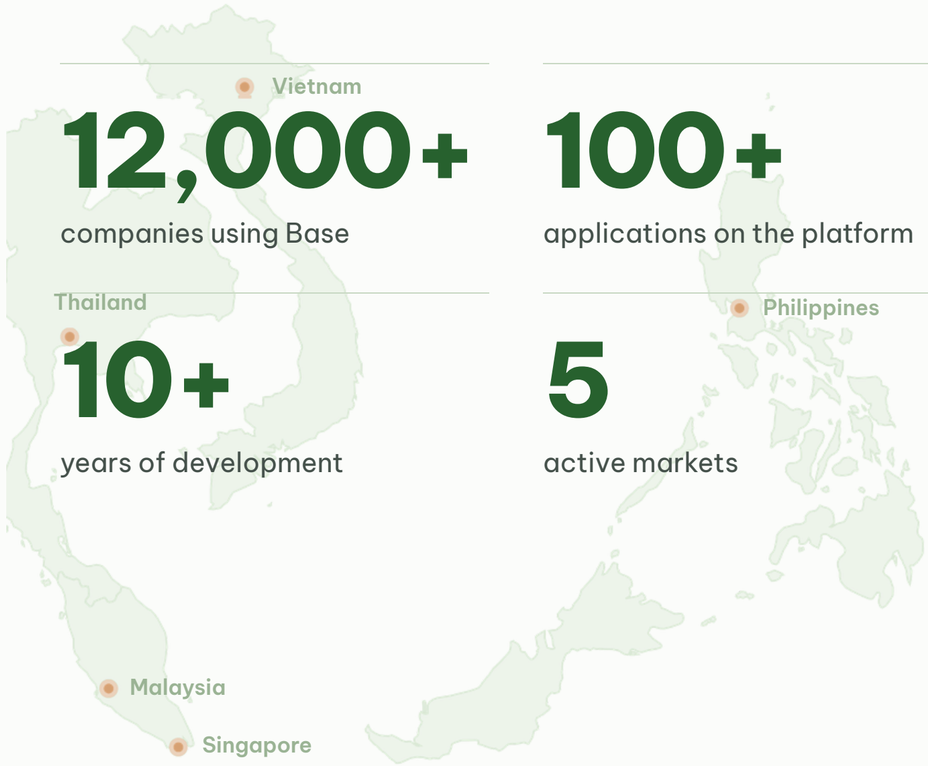
10+ years building a management platform for Vietnamese businesses

Base.vn was built to provide a business management platform that fits the way Vietnamese companies actually operate.

Over 10+ years, Base has focused on managing work, processes, internal communication and operational data, along with AI applications that support companies in their day-to-day work.

The platform is used by more than 12,000 companies, with an ecosystem of over 100 applications and services covering a wide range of management needs.

Beyond Vietnam, Base operates in several countries across the region and continues to invest in quality standards, information security and implementation capability for enterprise customers.



12,000+
companies using Base

100+
applications on the platform

10+
years of development

5
active markets

The system is built to international quality management and information security standards.

A platform certified to international security and quality standards

Traceability records must be kept for at least five years and provided on request, so the storage platform needs to meet information security standards.

Certificate of Registration

The Management System of:

BASE ENTERPRISE JOINT STOCK COMPANY

16th Floor – Tower A, Office building HUD Tower, No. 37 Le Van Luong Street, Nhan Chinh Ward, Thanh Xuan District, Hanoi City, Vietnam

Operates a

Information Security Management System

Which complies with the requirements of

ISO/IEC 27001:2022

This certificate is applicable for:

Provision of an information security management system applies to the activities of Development and supply of business management software

In accordance with the Statement of Applicability – Ver.2.0 dated 03 October 2024

EA Code: 33
Certificate of registration No: VN-10078-ISMS

Initial Certification Date:	12 February 2025
Current Certification Date:	12 February 2025
Certificate Issue Date:	17 February 2025
Certificate Expiry Date:	11 February 2028

SIGNATURE

Yevgeniya Mikheyeva
Operations Manager

SMG ISO 27001

Registered by:
Sustainable Management Group SMG, 98 George Street, Ottawa Ontario, K2Q3V1 Canada; and subject to the SMG Terms and Conditions for Certification. This certificate remains the property of SMG and must be returned to SMG upon its request. VSEC

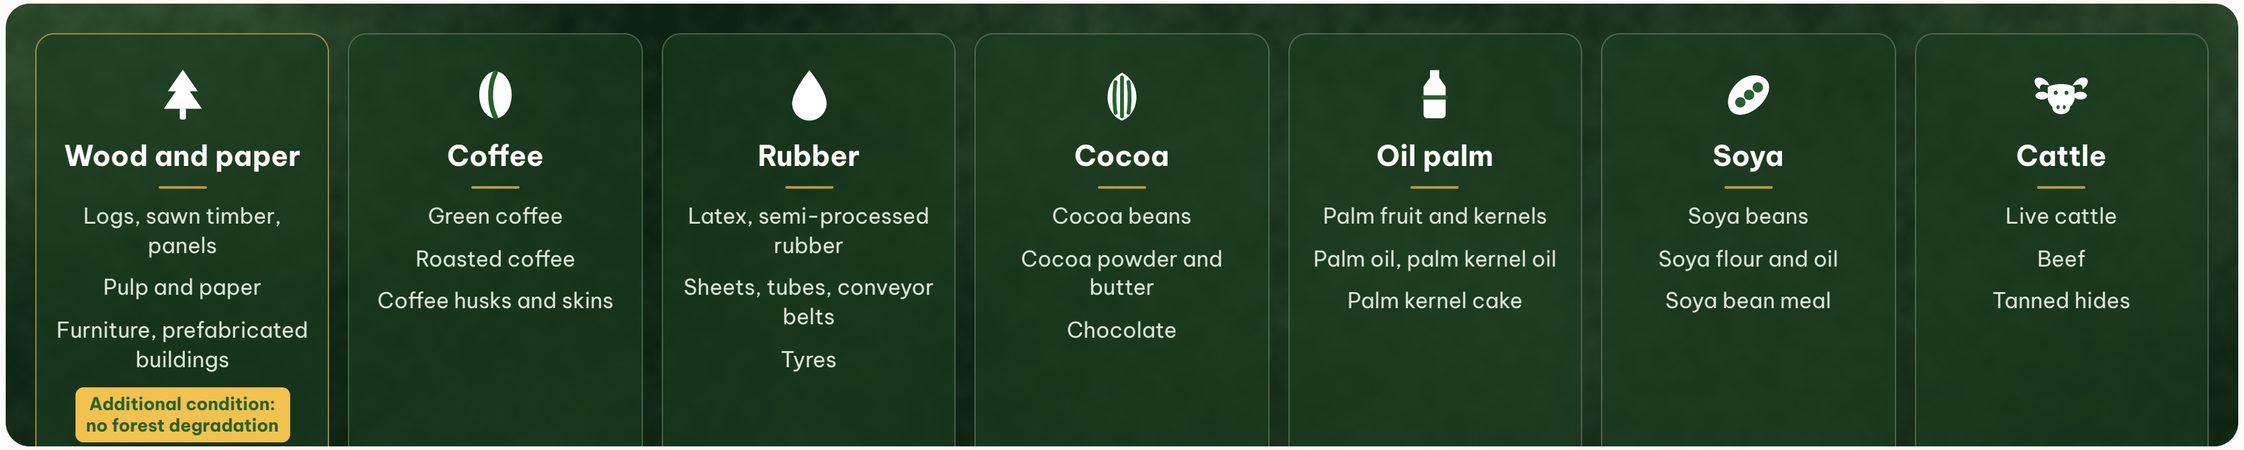
Security assessment certificate

Meets OWASP WSTG and OWASP MSTG

Issued 25 Jun 2024

Seven commodity groups fall within the scope of the EUDR

The regulation prohibits placing on the EU market goods linked to deforestation after 31 December 2020, including processed products made from these commodities. The same obligations apply to all seven groups.



31 Dec 2020

Deforestation cut-off date

Products from land converted from forest after this date cannot enter the EU

30 Dec 2026

Large and medium-sized companies

Must meet all requirements of the regulation

30 Jun 2027

Small and micro enterprises

Apply six months later

NOTE

Scope is defined by the HS codes in Annex I. Companies should check the exact HS code of each product rather than rely on its trade name.

These dates remain unchanged after the European Commission's May 2026 review.

Four things must be demonstrated, even for low-risk countries

01

Deforestation-free

The plot was not converted from forest after 31 December 2020.

02

Legal in the country of production

Land use rights and compliance with land, labour and environmental laws.

03

Geolocation of every plot

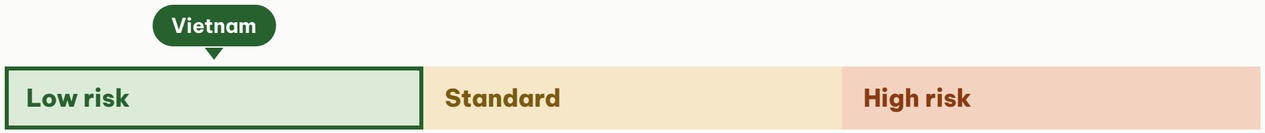
Polygons for plots of 4 ha or more, with the production period.

04

Retention and retrieval

Kept for at least five years and retrievable for each shipment.

COUNTRY RISK CLASSIFICATION · MAY 2025



SIMPLIFIED

- Importers are exempt from risk assessment and mitigation.
- Lowest rate of shipment checks.

UNCHANGED

- Plot geolocation and a due diligence statement for every shipment.
- Legality records, kept for five years.

PENALTIES FALL ON THE IMPORTER

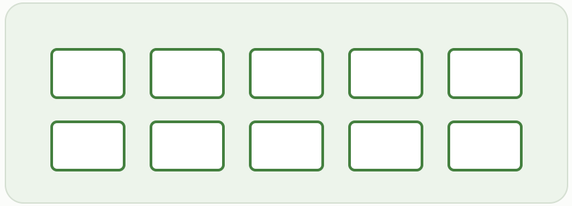
The importer files the due diligence statement and faces fines of up to 4% of its EU turnover. Vietnamese suppliers take on obligations through their contracts with importers.

REQUESTS ARRIVE BEFORE THE APPLICATION DATE

Importers typically ask suppliers to have data ready six to nine months before the application date.

The bottleneck is the shipment-level link code, not missing documents

Legal documents are usually complete. What is missing is a link code that traces an export shipment back to the exact plots that supplied its raw material.



Dozens to hundreds of plots

Shared warehouse, batch processing

Raw material is mixed

One export shipment

Buyers ask for data per shipment

?

Trace back to each plot

Records compiled after the fact fail verification

Records rebuilt at period end carry no timestamps and no confirmation from the person responsible.

Risk of losing existing orders

Importers switch to suppliers who already have the data rather than carry the penalty risk.

Weaker negotiating position

As the pool of compliant suppliers shrinks, those with complete data hold the pricing advantage.

A three-layer architecture built on the company's existing data

LAYER 03 · LOOKUP AND REPORTING
European buyers, export sales team

A lookup portal for end customers and record packs exported in the importer's template

LAYER 02 · TRACEABILITY DATA STORE
QA and compliance team

Link codes across all six stages, tracing each shipment back to individual plots

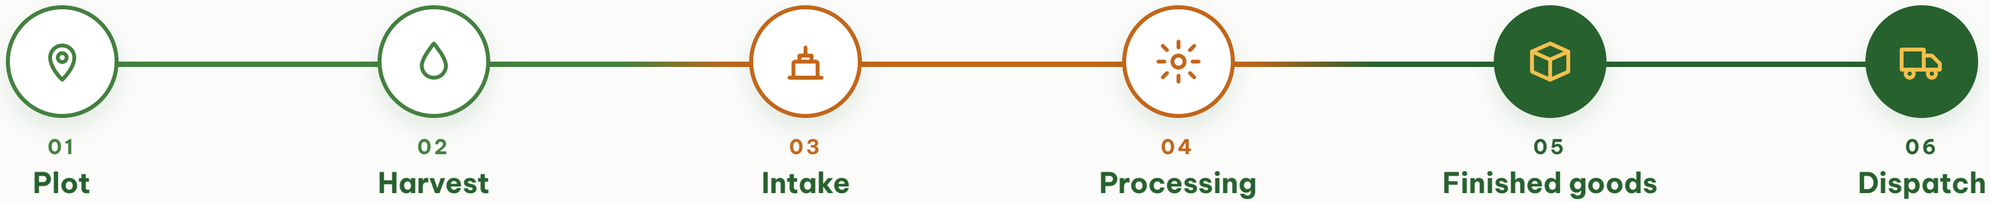
LAYER 01 · CAPTURE AT SOURCE
Plantation staff, storekeepers, purchasing staff

Mobile app at plots and weighing stations, harvest logs, digitised legal documents

The system does not replace the existing ERP or accounting software. It draws data from them and adds the missing piece: a shipment-level link code.

BASE.VN

Data is created at each stage, not compiled afterwards



STEPS 01 - 02

Plot and harvest

Plot geolocation, landowner, legal documents, deforestation risk check result, yield from each harvest

STEPS 03 - 04

Raw material and processing

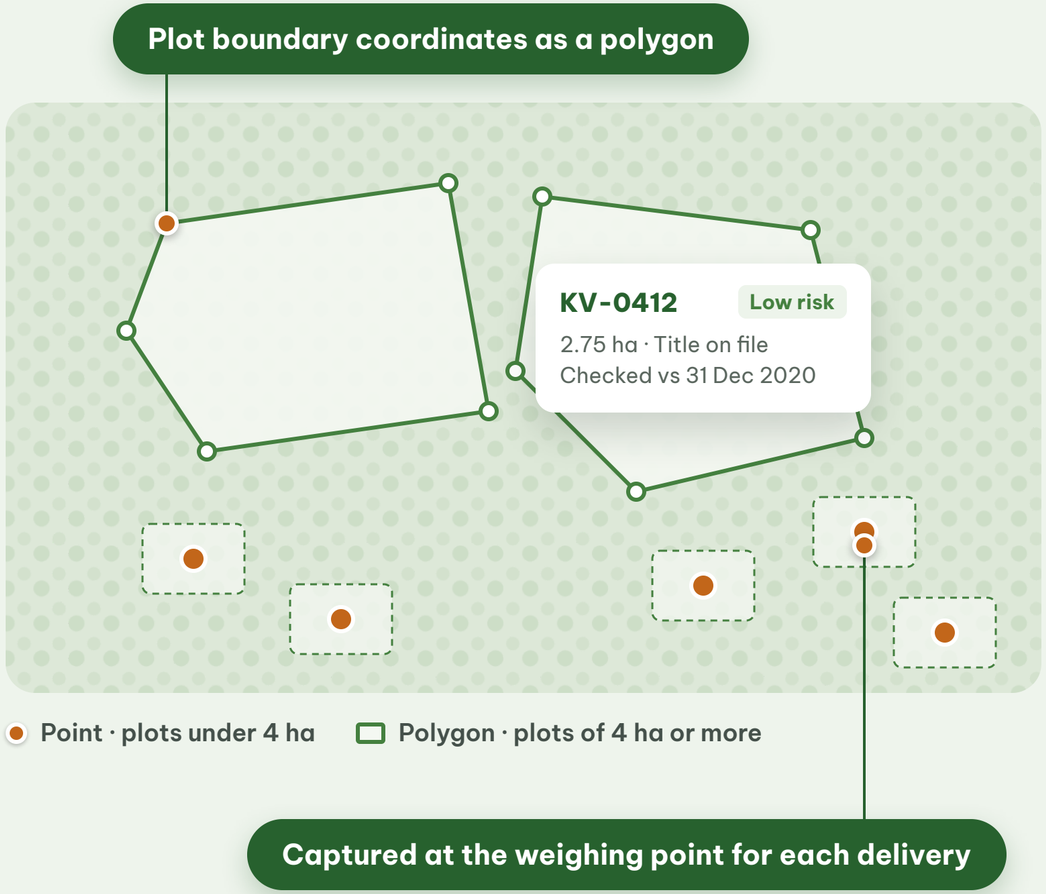
Weighing station code, net weight received, raw material lot code, processing lot code linked back to the inputs used

STEPS 05 - 06

Finished goods and dispatch

Finished goods lot code, warehouse receipt code, order code, dispatch code and the accompanying traceability records

Each stage creates data at the moment it happens. Records compiled at period end do not pass cross-checks.



PLOT RECORDS · GEOLOCATION

One record per plot, with geolocation and deforestation check results

Where material is bought from many smallholders, geolocation is captured at the weighing point via the mobile app and attached to each delivery.

Geolocation
A point for plots under 4 ha, a polygon for plots of 4 ha or more.

Land user
Household or organisation, with the land use rights certificate.

Forest status
Satellite imagery checked against 31 December 2020.

Yield by season
Each harvest, with date and recorder.

BASE.VN

DIGITISED RECORDS · AUTOMATIC CHECKS

Each plot is entered once and checked automatically

Landowner details, legal documents and plot boundaries are digitised at source. The system checks them against satellite imagery and stores the result with the record.

Declare once

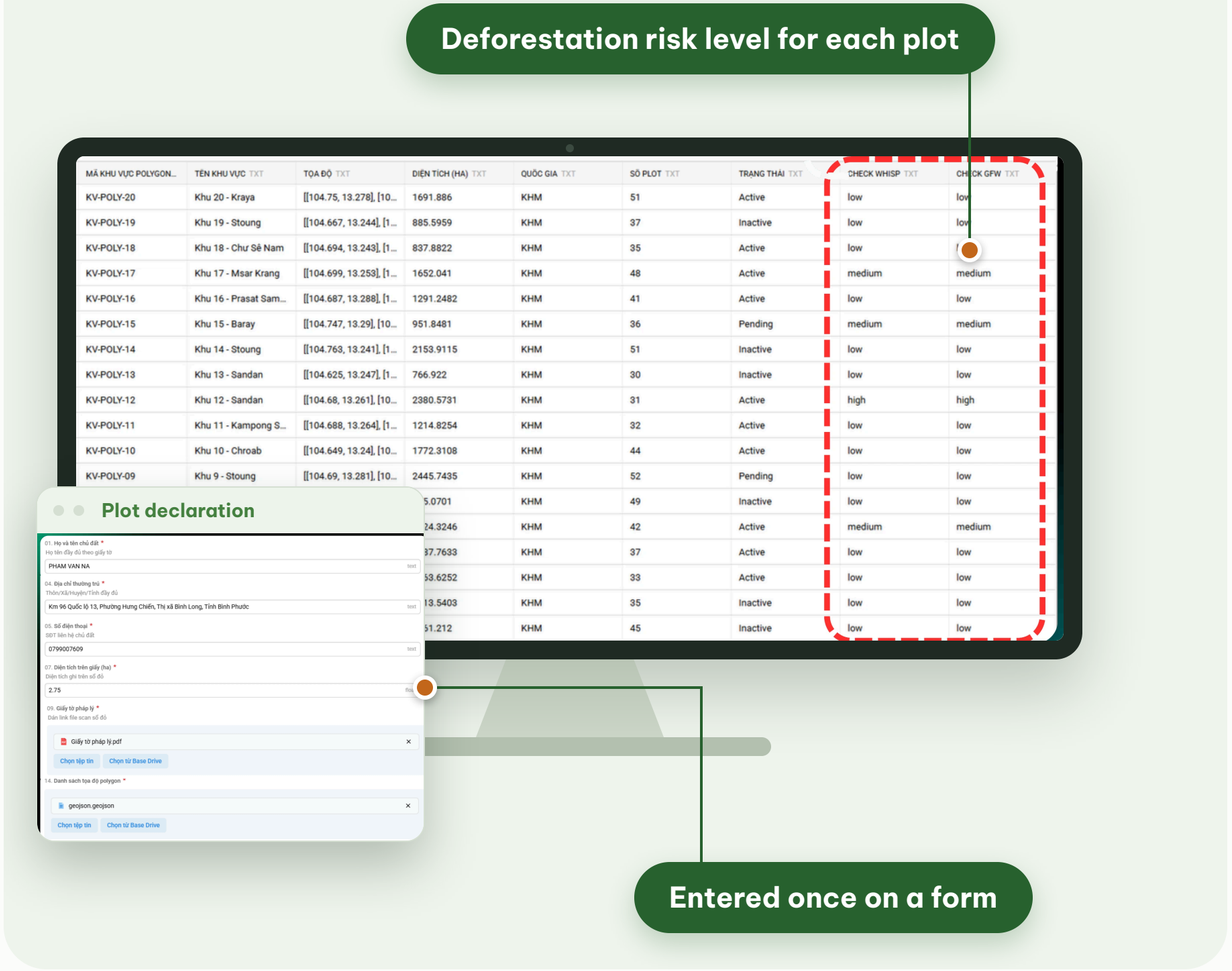
Landowner, legal documents and coordinate file on a single form.

Satellite check

Checked via Whisp and Global Forest Watch.

Result stored with the record

The risk level sits on the same row as the plot data.



BASE.VN

Paper slips at the weighing station become coded data

The same recording step, but the data goes straight into the system with a timestamp, the person responsible and a link back to the plot.

STEP 02

Each weighing slip generates a code

The station code links to the plantation code and the plot polygon.

Each slip is tied to a specific plot and cannot be backdated

BASE.VN

Each stage generates a code, and the codes form a chain

This is what makes traceability possible. From the dispatch code on the shipping documents, the system traces back to the exact plots that supplied the raw material.

01 — Plot
KV-0412
Geolocation, landowner, legal documents

›

02 — Delivery
GN-9910
Harvest date, weight

›

03 — Raw material
NL-2291
Several slips grouped into one lot

›

04 — Processing
CB-7714
Processing lot made from raw material lots

›

05 — Finished goods
TP-3380
Specification, quantity, production date

›

06 — Dispatch
XK-4471
Linked to the order shipment

Trace back When a buyer enters XK-4471, the system returns the entire upstream chain: finished goods lot, processing lot, raw material lots, each delivery slip and the list of plots with geolocation.

Stage codes in the operating system

Each completed transaction creates a data row with its own code that references the code of the previous stage. Green boxes mark the stage code, red boxes mark the linked data.

03 Raw material lots

Linked station code

LOOKUP PORTAL · TRACEABILITY

Buyers look up the full supply chain themselves

Importers enter an order code to see where a shipment's raw material came from, without waiting for the supplier to compile records.

No account needed

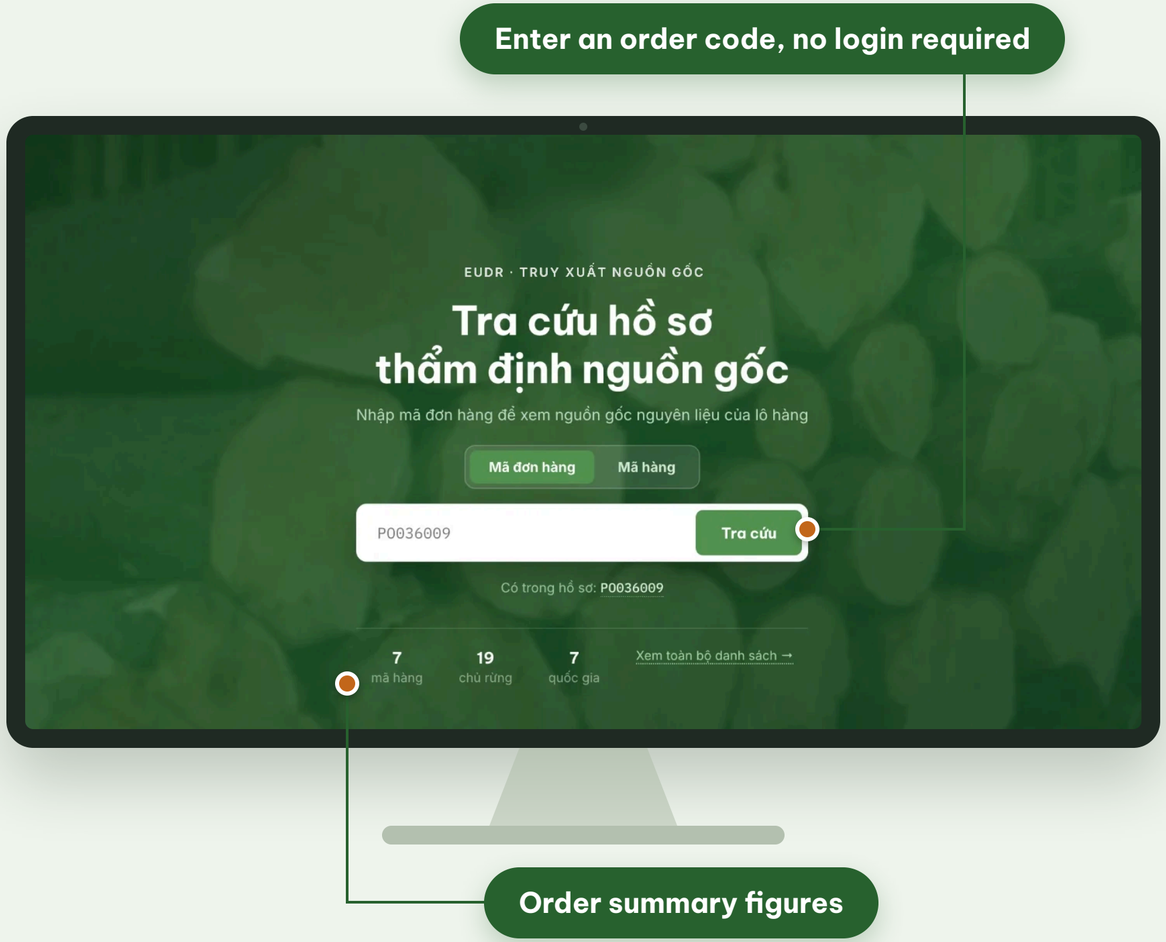
Only the order code, with no need to contact the QA team.

Full chain returned

Sourcing area, plots, stage history, legal documents.

Reports in the required template

In the format European importers use.



DUE DILIGENCE RECORD · BY ORDER

One due diligence record for every order

After entering the code, the buyer opens the record for that order, presented as a traceability sheet by dispatch code.

Shipment overview

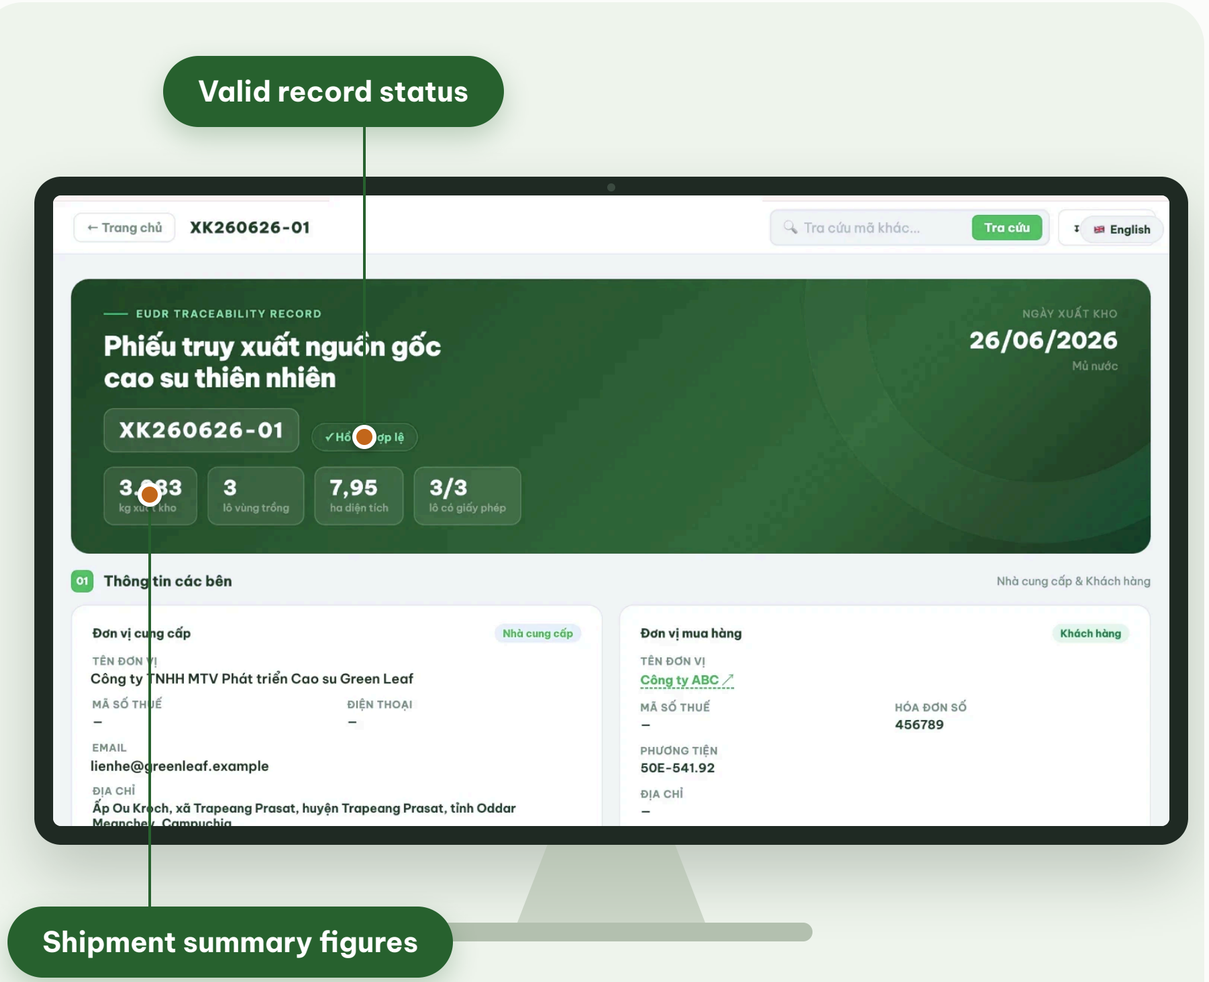
Dispatched weight, number of sourcing lots, area, permits.

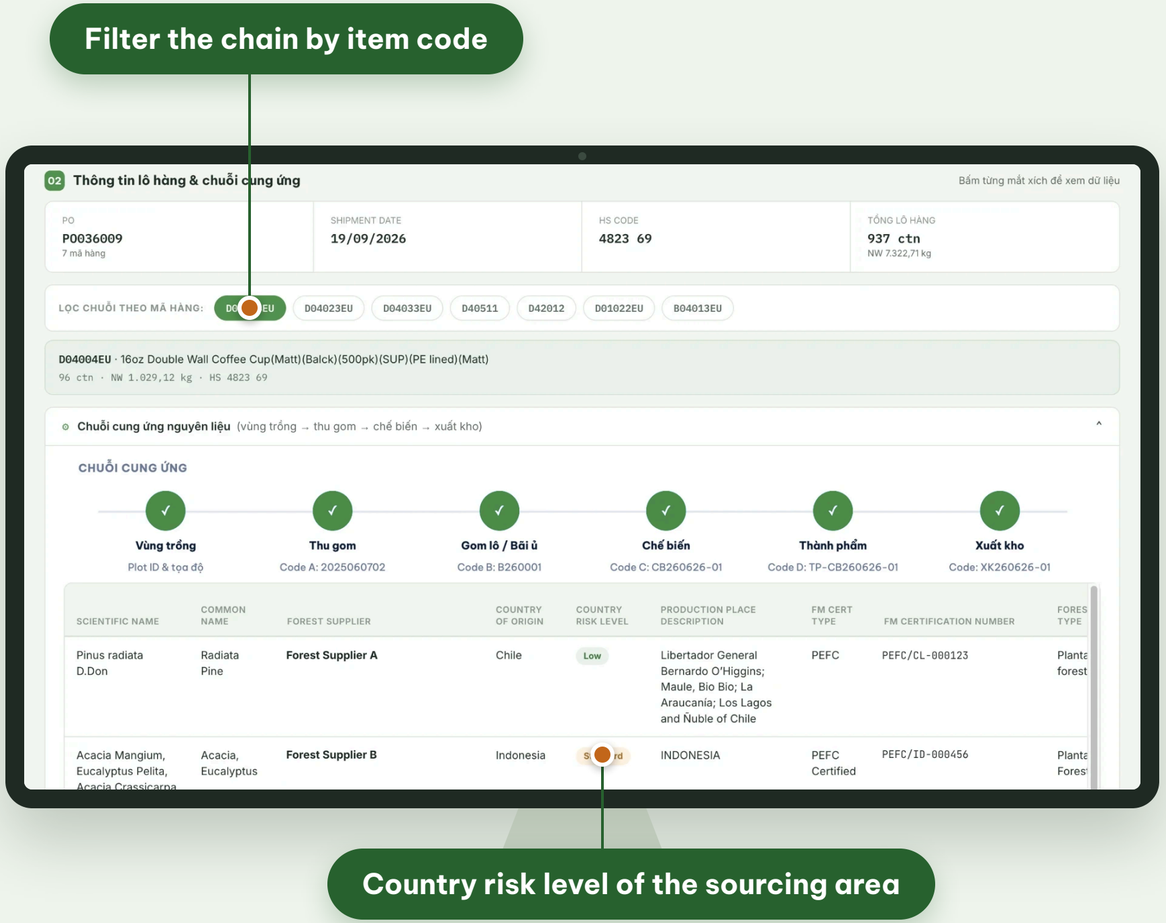
Parties

Supplier, buyer, invoice, means of transport.

Status and quick lookup

Valid record label, look up another code, switch language.





SUPPLY CHAIN · BY ITEM CODE

Trace each item code back to its sourcing area

Each item code in an order has its own chain through six stages, from plot to dispatch. Click any link to see its data.

Filter by item code

Select an item code to see its chain and volume.

Six-stage chain

Plot, collection, lotting, processing, finished goods, dispatch.

Sourcing area details

Species, country, risk level, harvest location, certificates.

BASE.VN

SOURCING MAP · GEOJSON

Every forest area shown on the map

Boundaries come from the suppliers' GeoJSON files. Forest owners without a boundary file are flagged separately.

Breakdown by country

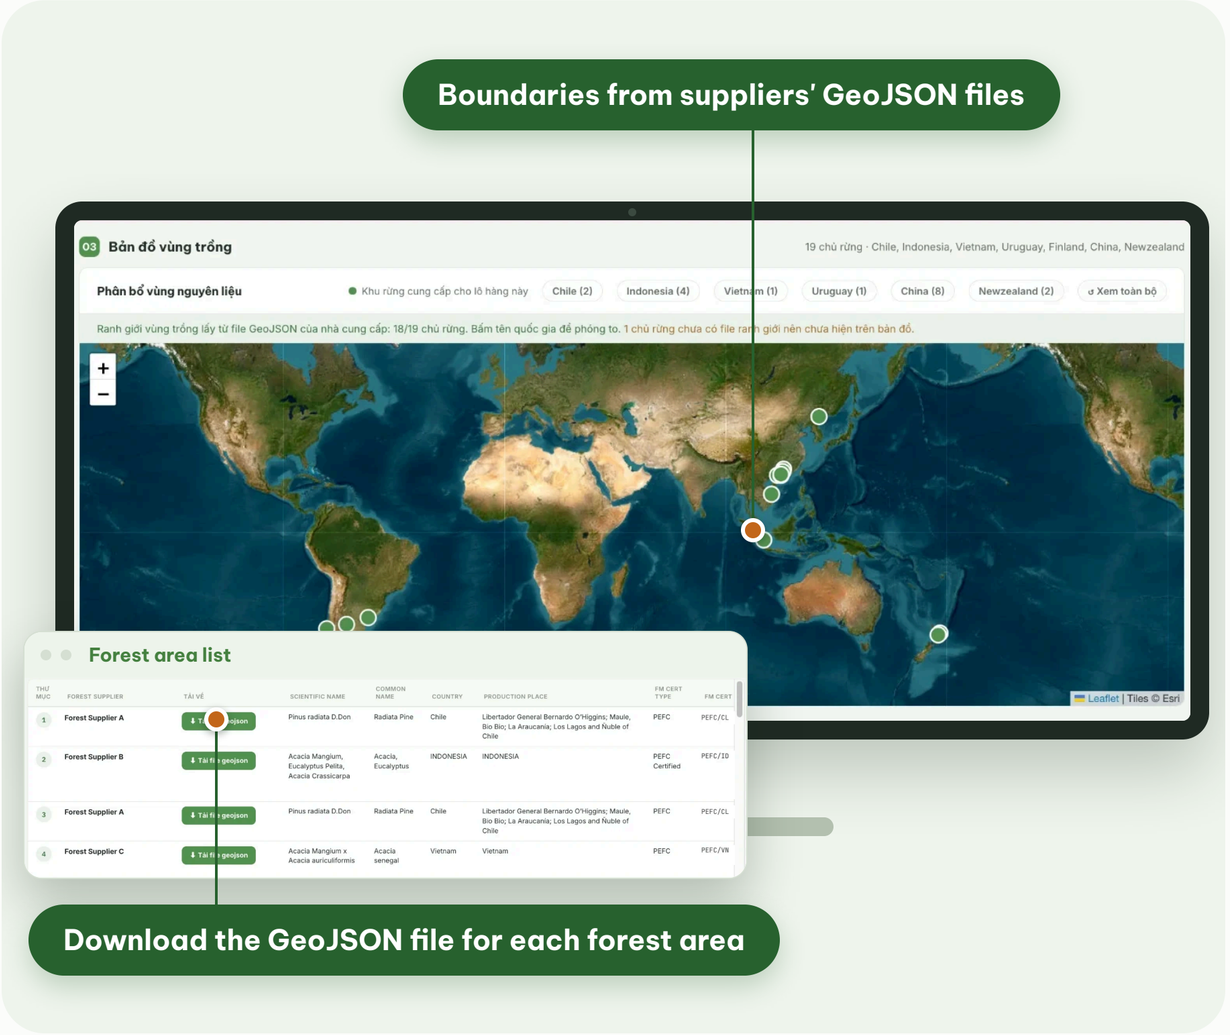
Filter forest areas by country to zoom in on the map.

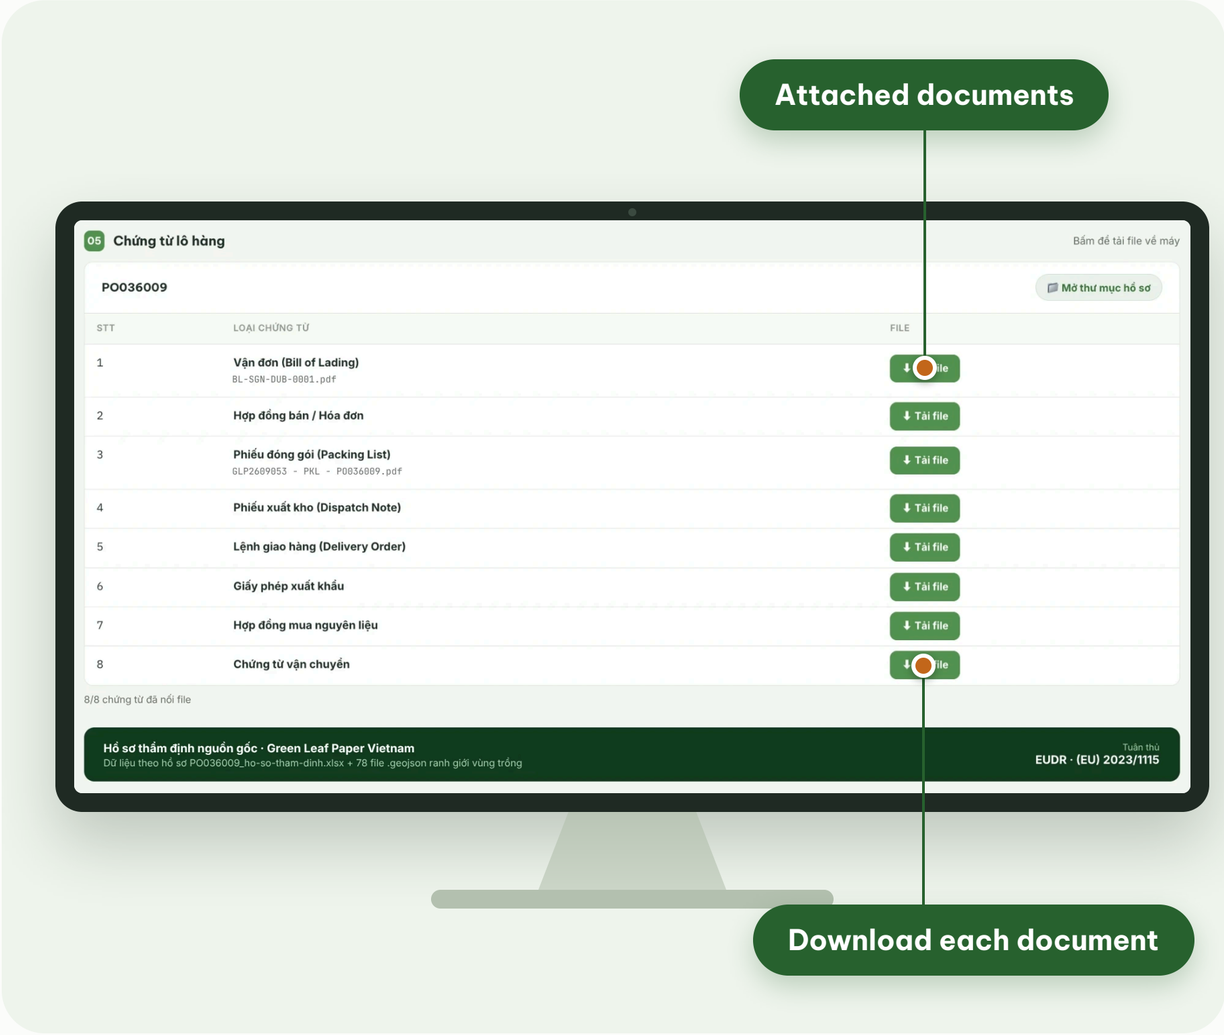
Missing data alert

Shows how many forest owners have no boundary file yet.

Download by forest area

A list of forest areas with a GeoJSON download button.





DOCUMENTS · BY SHIPMENT

All shipment documents in one place

Eight types of shipment documents sit alongside the due diligence record. Each can be downloaded directly, or the whole shipment folder can be opened.

Eight document types

Bill of lading, invoice, packing list, dispatch note, permits.

Document completeness by shipment

The system counts attached documents against the total required.

Regulatory basis

Each record states the applicable regulation: EUDR (EU) 2023/1115.

Compliance records to importer requirements, integrated with existing systems

DATA OUTPUT

Traceability record pack for each shipment

- Geolocation of every plot that contributed to the shipment
- Land use rights documents for each plot
- The chain from plot to shipment, with a timestamp at each step
- Forest status check against 31 December 2020

INTEGRATED SYSTEMS

Systems the company already runs

- Existing ERP and accounting software
- Electronic scales and devices at purchasing stations
- Excel files and forms used by departments
- Importer systems where a direct connection is required

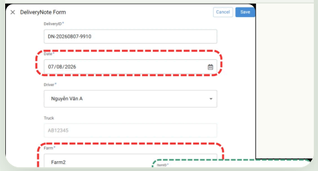
BASE.VN

Existing systems integrated, data in a single store

For companies that already use management software, data is pulled from those systems, merged with data newly captured on Base, and published to the traceability portal.

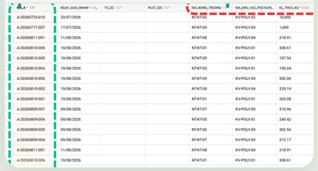
STREAM 1 · NEW CAPTURE ON BASE

Mobile app



Delivery at the plot

Weighing slip



Weighed, code generated

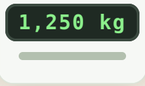
STREAM 2 · EXISTING COMPANY SYSTEMS

ERP

Excel

	Lot	Date	Kg	Plo
1	L01	11	337	KV-
2	L02	12	354	KV-
3	L03	13	371	KV-
4	L04	14	388	KV-

Electronic scale



Paper form

Existing systems stay in place. Only the data needed for traceability is pulled.

Connection layer

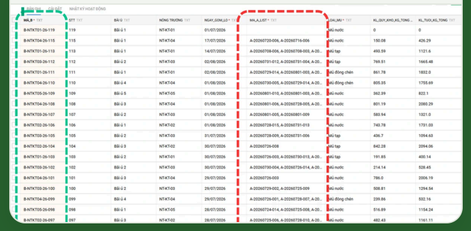
- API connection
- Database sync
- Scheduled file import

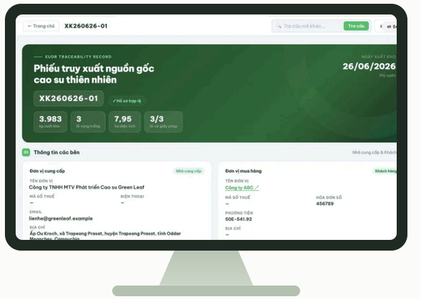
TRACEABILITY DATA STORE

One data source for every shipment

Data from both streams is standardised and linked by lot code across all six stages.

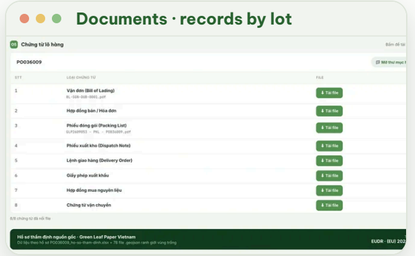
Traceability data store · lot code





OUTPUT 01 · LOOKUP PORTAL

Documents · records by lot



OUTPUT 02 · RECORD PACK BY LOT

The connection method is confirmed after the on-site assessment, depending on the systems the company uses.

A rubber producer preparing for EUDR through day-to-day operations

CASE STUDY · RUBBER

Chư Sê Kampong Thom

Grows, processes and exports natural rubber from consolidated plantations in Cambodia. All latex in its export shipments comes from plantations the company manages directly.

16,268
ha of plantation within traceability scope

04
directly managed plantations

33,000
tonnes of latex per year

PEFC
forest management and chain of custody

PEFC · EUDR COMPLIANCE JOURNEY

2022
Awareness training
Awareness training at all levels with a consulting partner.

2023
PEFC certification
Forest management and chain of custody systems.

2024 - 2025
EUDR DDS adopted
A three-step due diligence process for sourcing areas and each shipment.

2026
Fully documented exports
Shipments with complete traceability records sold to international buyers.

RESULTS ON THE BASE PLATFORM

700,000+ pages of documents
Ten years of paper records digitised in 3 - 4 months.

A single shared data core
Harvest, processing and sales data in one place.

Lot-level traceability
From a finished goods lot code back to raw material, plot, harvest date and legal documents.

A paper packaging maker tracing raw material across multiple tiers

CASE STUDY · EXPORT PAPER PACKAGING

Go-Pak Paper Products Vietnam

Manufactures paper packaging for export to Europe. Wood passes through several tiers before it becomes the paper used in production.

THE CHALLENGE

- One order contains many item codes, each with its own raw material chain.
- Wood comes from many forest owners in several countries, with boundaries scattered across supplier files.
- Buyers need due diligence records and documents for each order.

RAW MATERIAL CHAIN TO TRACE

Forest
Many owners, many countries

Pulp
Pulp mill

Paper
Paper roll supply

Factory
Paper packaging production

SOLUTION DEPLOYED ON BASE

Due diligence record by order
Parties, invoices, HS codes and certificates in one record.

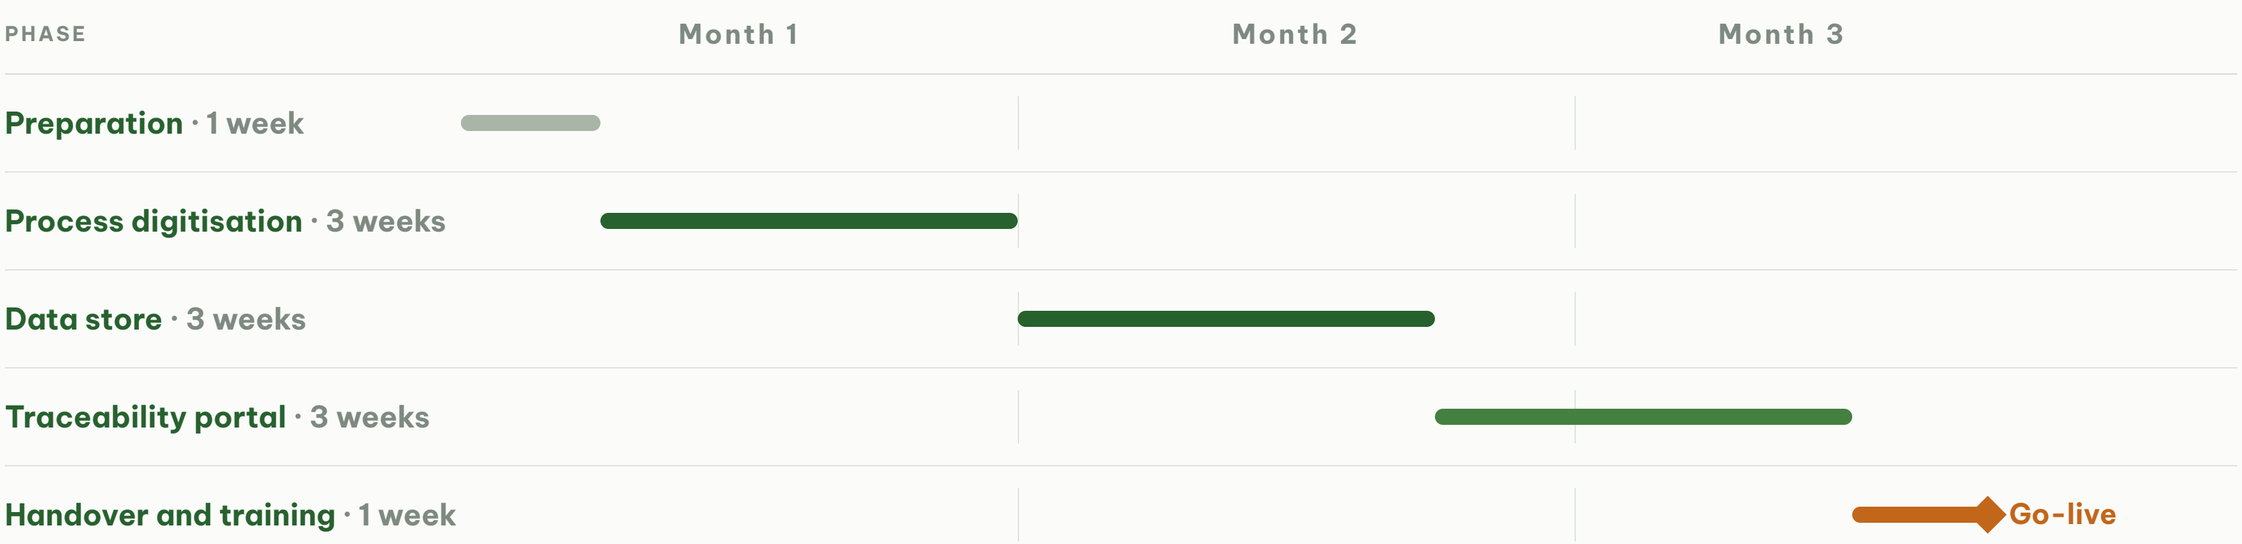
Supply chain by item code
Filter by item code and view data for each link.

Forest map
Boundaries taken from suppliers' GeoJSON files.

Customer lookup portal
Enter an order code to view and download documents.

Proposed implementation roadmap

Five phases with a single go-live. The duration of each phase is confirmed after the on-site assessment and can be shortened to prioritise the 30 Dec 2026 deadline.



BOTH PARTIES

Agree scope, sign off each step

COMPANY

Project lead, QA, ERP administrator, end users

BASE

Assessment, system setup, training, post go-live support

CONTACT INFORMATION

Let's talk about traceability for your business

PROPOSED NEXT STEP

On-site assessment of current operations

Review the data flow, identify missing records and define the implementation approach.

TRY THE SYSTEM

Scan to look up a sample order

See the due diligence record, supply chain, sourcing map and shipment documents as a European buyer would.
